

Practical Lab – for LoadRunner

WORKSHOP OVERVIEW

In this workshop, students will apply what they have learned from the previous Load Testing workshops.

The goal of the workshop is to give the student an opportunity to reinforce that information in a more realistic WEB environment under the guidance and tutelage of an experienced Load Engineer.

COURSE OBJECTIVES

- Review previous workshop's lessons learned
- Apply technology to build a load test, execute and analyze the results
- Best Practices for environments

PREREQUISITES

- Basic concepts of Quality Assurance.
- Managing Effective Application Performance - Workshop
- Designing an Effective Performance Test Using LoadRunner Controller 9 – Workshop
- Scripting for an Effective Load Test Using VuGen 9 – Workshop

INTENDED AUDIENCE

- Web application programmers and testers
- QA personnel
- Network administrators
- Performance test team leads
- Performance test script developers

DURATION: 1 Day

COURSE OUTLINE

Plan, Design, Script and Run a Performance Tests

- Review this workshop's Objectives
- Design and build Load Test
- Execute Load Test
- Analyze Results
- Review Experiences
